

Creating a PDF in Laravel Framework

composer create-project --prefer-dist laravel/laravel pdf

<https://github.com/barryvdh/laravel-dompdf>

composer require barryvdh/laravel-dompdf

Add inside providers and aliases arrays in config.php

Now,

php artisan make:controller PDFMaker

Web.php

```
Route::get('/', 'PHPMaker@make');
```

PDFMaker.php

```
public function make(){
    $data =
    [
        'title' => 'Invoice 2128',
        'total' => '679',
        'products' => ['jhutta', 'mojha', 'topi']
    ];
    $pdf = PDF::loadView('pdf.invoice', $data);
    return $pdf->download('invoice.pdf');
}
```

pdf/invoice.blade.php

```
<h1>{{ $title }}</h1>
<p>{{ $total }}</p>
@foreach($products as $product)
    <p>{{ $product }}</p>
@endforeach
```
